Financial Highlights

Hedging Policy

- Consistent application of hedging policy since April 2004
- 70% of our forecasted net foreign currency cash flow exposure arising in USD block, HKD, JPY is hedged versus the CHF and Euro
- In the case of the USD, the net exposure takes into account purchases of precious metals and diamonds
- Hedges are entered into each month in respect of forecast net exposures arising one year forward
- Different types of hedging contracts are used including pure forward contracts and option based contracts
- Only certain forward contracts qualify for hedge accounting:
 - gains/losses associated with realised forward contracts are released in the gross margin only after the underlying external transaction has occurred;
 - 'marked to market' gains/losses associated with unrealised forward contracts are deferred to reserves
- Certain derivative contracts, usually option based, do not qualify for hedge accounting:
 - realised and unrealised gains/losses are released to FX differences in investment income/expense line (foreign exchange gains/losses – other derivatives).
